- - ○ Improved detection of destination of the dropped item based on Revit instance
  - Analytics
    - ○ Fixed issue with Analytics not reporting the correct version number per event
  - Installation
    - ○ Fixed backwards compatibility issue due to upgrade of settings.config file

---

AVAIL Browser 5.0.1 (released 1/9/2023)

AVAIL Browser Core

New

- Introduces new drag-and-drop workflow for loading Revit content from AVAIL Desktop.
  - ○ Pop-up window
    - ■ Drag-and-dropping Revit content objects into the active session of Revit displays a modal window of the document's loadable elements.
    - ■ Keeping the Pop-up window open and selecting another Revit content object from AVAIL Desktop automatically opens and displays the file's contents.
  - ○ Adds support for downloading Revit elements hosted in BIM360/ACC Docs through Autodesk Desktop Connector on release of drag-and-drop operation
- Redesigned UI
  - ○ Simplified display of elements in a Revit content object and reduction of options condensed into an options menu.
  - ○ Checkboxes next to the Revit element in a list to make selection of items intended to load clearer to the user.
  - ○ Ability to Select All/Select None option with checkbox control.
  - ○ Parameters tab groups items based on Family Type for Family content objects.
- Removal of dependencies (.dll files) to reduce conflicts with other Add-Ins in Revit
- Family content object with one element automatically loads into the active project on drag.

Fixed

- Fixed issue with Add as Tag Context Menu item not displaying
- Fixed margin issue in alert dialogs
- Fixed issue with Pop-up window placement on multiple monitors
